

What is NEMO FLEET API ?

NEMO FLEET REST API provides live vehicle parameters of MLMML EV vehicles using advanced telematics, empowering businesses with actionable insights for seamless fleet management.

Why Choose Our API?

- 1. Real-Time Data at Your Fingertips:** Our REST API provides continuous, real-time data streams from EVs in JSON format, ensuring quick and efficient data integration into your systems.
- 2. Curated Vehicle Parameters:** Gain access to Key EV metrics regarding Vehicle State , Location , Odometer and other critical parameters.
- 3. Easy Integration:** Our API is designed to integrate seamlessly into your existing platforms with minimal setup.

Overview of NEMO FLEET APIs :

Realtime vehicle details can be obtained by calling the following APIs.

- **Vehicle Status API** provides the following vehicle parameters details

Vehicle Status API

- VIN
- Vehicle State : Driving / Idle / Charging
- Battery Parameters : SOC , DTE
